MCA03 – Due: Fri., Nov. 13, before 11:50 PM (MIDNITE)

Wireless Communications Channel Modeling

The main objective of this MATLAB-based **Class Assignment 04** (**MCA04**) is to expose the students to the fundamentals of digital communications. Each student in the group must proceed to watch and **study** the complete set of modules (**12 videos**) presented by Prof. Iain Collings and provided at the following link:

https://www.youtube.com/watch?v=MAddbFfCsIo&list=PLx7-Q20A1VYLRKxauztmyLx7eXKbg1Ez4

After the assignment is completed, the group must submit a TAT (Task Assignment Table) document in **.pdf** form, with all members in the group appearing in the customary fashion in the TAT document. There is no need to modify any part of the TAT document. All is needed for the group is to write, in order, according the attendant's list, the name of each group member. This will constitute a certification that the assignment has been completed. Part of the material in this course will be needed for **EXAM03** and **EXAM04**.
