

Task Assignment Table

Prof. Domingo Antonio Rodríguez

This table describes the **work distribution** performed by **each member** of a student working group. **Each student in a group must perform a complete task. Each student in a group is allowed to perform one and only one task for each MATLAB CLASS ASSIGNMENT.** Each of the 36 cells in the table below has a two-entry value, **XXX in blue** and **YY in red**. The values of the **blue XXX entries** go from **000** to **100** and represent the percentage of each task performed by each student. For example, if a student performs **80%** of task one, then the entry in **blue value** should be **080** (notice the **three-digit entry**). All tasks have equal weight and the correct weight is obtained by dividing 100 by the number of members in a group. For example, if a group has **4 members**, then each task weighs **25 points**. If a group has **5 members**, then each task weighs **20 points**.

After completing the table, proceed to calculate the sum of all the **blue entries** of each column and place the result in the **blue cell** at the **bottom** of each column of the table. After satisfactory completion of the assignment, the sum of all the **blue cells** of the last row of the table must add up to the maximum sum of **500**, placed on the empty entry (**BOTTOM**) on the last row. Compute the sum of all the **red entries** of each row and place the result in the **gold cell** to the right of each row, at the last column of the table. Please, **DO NOT MODIFY** unused cells.

It is expected that each student completes **100%** of his/her task. If a student **does not submit** his/her task on time to the group, the group must write (**000,00**) on the appropriate entry associated with the task of that particular student. If a student submits **a poor job**, the group should try to help and assist this student to improve his/her work; however, this is not mandatory. The group should proceed and inform the professor about the poor nature of the job submitted. The professor will try to provide **help** to the student in need if requested **not later than 48 hours before the deadline**.

TASKS	TASK 01	TASK 02	TASK 03	TASK 04	TASK 05	TASK 06	TK
POINTS	VV	VV	VV	VV	VV	VV	100
